

BRIDGE VIEW EVENTS CENTER

Built in 2007, the 92,000-square-foot Bridge View Center hosts conventions, concerts, theatrical events, and more. It features an expo hall, adjoining conference/meeting spaces, a theatre, and a grand lobby.

AVANT ACOUSTICS provided the following services:

- Room acoustics consulting
- Audio-visual system design
- Sound reinforcement system design
- Paging system design
- On-site system commissioning including operator training and assistance during the first use

Project Highlights:

AVANT ACOUSTICS consulted on the acoustics for the theatre, conference rooms, and exhibit hall. AVANT also provided recommendations for isolating the noise of the facility's mechanical and electrical systems.

In addition, AVANT designed sound reinforcement systems for the theatre and exhibit halls featuring automatic microphone mixing, as well as a manual audio mixing console for more flexible and complicated audio production. The paging and audio-visual systems for the facility were also designed by AVANT.

Project Location:
Ottumwa, Iowa

Facilities:
Multipurpose Events Center
