

JE DUNN CORPORATE HEADQUARTERS

JE Dunn Headquarters is a 200,000-square-foot, state-of-the-art office building in downtown Kansas City, Missouri. The building features underfloor air distribution and extensive use of locally obtained materials, which helped the facility achieve LEED Gold accreditation.

AVANT ACOUSTICS provided the following services:

- Room acoustics and noise control consultation
- Audio-visual and sound reinforcement system design
- On-site system commissioning

Project Highlights:

AVANT ACOUSTICS designed very functional, yet cost effective audio-visual and sound reinforcement systems for several conference and training rooms. The conference and training rooms have AV control systems with touchpanel interfaces, motorized projection screens, and integrated teleconferencing capabilities. The tiered training room creates a truly collaborative learning experience with a custom control system, interactive pen display, and classroom software that enables both participants and the instructor to share and interact with content from any computer in the room.
